

New, Improved XTEND™ Mold Sealer Applies Streak Free With NO Polishing
From Axel Plastics Research Laboratories, Inc.

Woodside, NY – A new addition to the XTEND line of semi-permanent mold releases – XTEND S-19B, a mold sealer that – offers easy streak free application. Nancy Teufel, Axel’s Technical Support Manager explains that “Mold sealers generally have higher solids than mold releases and this makes it more difficult to apply and achieve a high gloss; adverse weather conditions (high temperature and/or humidity) makes application even more difficult, and streaks and hazing can frequently occur.”

According to Teufel, “S-19B puts and end to streaks. This product was tested in demanding environmental conditions in the southeastern United States this summer, and the results were super. Customers love how easy it is to apply – I find that they are no longer reluctant to use a mold sealer”.

XTEND S-19B is a low viscosity liquid designed for wipe on at ambient temperature. Once applied, the sealer is simply left to dry and cure – no wipe off or polishing is required to achieve a glossy class “A” finish. Axel’s new mold sealer also aims to provide better styrene resistance and to improve release of low VOC gel coats. XTEND S-19B is available in single gallon packages, 15 gallon mini-drums, and 55 gallon drums.

Axel is a 62-year-old ISO 9001 registered manufacturer of proprietary mold releases, sealers, and cleaners and process aid additives. The company’s products are available from stocking distributors worldwide. Axel’s products comply with the regulatory requirements of TOSCA, DSL, EINECS, Japan, Australia, and Korea.
