

FOR IMMEDIATE RELEASE

No Polishing Required: New XTEND 850 Spray-On Semi-Permanent Mold Release From Axel USA

Manufacturers producing large parts, like boat hulls, or with high productivity and cosmetic demands, like tub & shower production can benefit from a new easy spray-on semi-permanent mold release, XTEND 850 from Axel Plastics Research Laboratories, Inc., Woodside NY, USA.

XTEND 850 is a proprietary formulation designed for easier application with reduced incidence of hazing. Typically 4 coats of the low solids, solvent-based mold release are simply applied with HVLP (high volume low pressure) spray equipment and allowed to dry without any polishing. The solvent formulation of XTEND 850, which is free of hazardous air pollutants (HAPS), allows the mold release to dry quickly at ambient temperatures. Therefore, subsequent coats of release can be applied without waiting. Reduced labor costs and improved productivity result from both the quick-and-easy application and the durability of the release tooling.

"Companies producing large molded products that must look great can benefit significantly from this new XTEND spray-on," said Glenn Pfister, Axel's Senior Technical Support Representative. "And it's nice to know that customers are calling us to back this up with impressive results after using XTEND 850."

XTEND 850 is just one the cleaners offered by AXEL. The 60-year-old, ISO 9000 registered company also manufactures over 600 process or resin specific process aid additives and external release agents under the trade names XTEND and MoldWiz. All of AXEL's products are formulated from raw materials that comply with the chemical substance inventory lists of TOSCA, DSL, MITI, EINECS, Australia and Korea. Customers are served both through direct sales and by a network of 32 stockings distributors located in 25 countries around the globe. AXEL encourages request for evaluation samples by visiting the company's web site at: <http://www.axelplastics.com>.
